

[1/3] ex 1 $P_{6;3,2} = \frac{6!}{3!2!} = 60$ (3)

[1/6] ex 2 (a)
i) $C_{6}^{10} = \frac{10!}{(10-6)!6!} = \frac{10 \cdot 9 \cdot 8 \cdot 7}{1 \cdot 2 \cdot 3 \cdot 4} = 210$ (3)
ii) PRB \rightarrow (1)

(b) il reste 4 ex à choisir parmi 8: $C_4^8 = 70$ (2)

[1/8] ex 3 (c) E_1 "obtenir 444"
 E_2 "obtenir 111" (2)

(b) $\# \Omega = 4 \cdot 4 \cdot 4 = 64$ (1)

(c) E_1 et E_2 car $E_1 \cap E_2 = \emptyset$ (2)

(d) C = "obtenir 3 ch. pairs" (2)

D = "obtenir 3 ch. identiques" car $C \cap D = \{ "222", "444" \}$

(e) i) $\frac{4}{4} \cdot \frac{4}{4} \cdot \frac{4}{4} = \frac{1}{8}$ (1)

ii) "112" ou "121" ou "211" : $p = \frac{3}{64}$ (1)

iii) E = "Somme ≤ 4 " = "Somme = 4" \cup "Somme = 3"
= "112, 121, 211" \cup "111"

$\hookrightarrow p(E) = \frac{4}{64}$ (3)

\bar{E} = "Somme > 4 " $\Rightarrow p(\bar{E}) = 1 - p(E) = \frac{60}{64}$

iv) 6 possibilités $\Rightarrow p = 6 \cdot \frac{1}{64} = \frac{6}{64}$ (2)

v) F = "444" \cup "444" \cup "444" (2)

$\hookrightarrow p(F) = \frac{1}{4} \left(\frac{3}{4} \right)^2 + \frac{3}{4} \cdot \frac{1}{4} \cdot \frac{3}{4} + \left(\frac{3}{4} \right)^2 \cdot \frac{1}{4} = 3 \left(\frac{3}{4} \right)^2 \cdot \frac{1}{4} = \left(\frac{3}{4} \right)^3 = \frac{27}{64}$

$$P(DF | DO) = \frac{P(DF \cap DO)}{P(DO)} = \quad (2)$$

$$= \frac{0,0017}{0,0413} = \frac{0,01 \cdot 0,17}{0,01 \cdot 0,17 + 0,99 \cdot 0,04} \approx 4,1\% \quad (2)$$
